

SmartGRIP

Boosting Connection and Extending Battery Life

LiveU's innovative SmartGRIP device enhances the use of the LU-Smart smartphone application, allowing broadcasters to go live at a moments notice from almost any location. The SmartGRIP holds a rechargeable battery allowing broadcasters to broadcast live from a smartphone without the limitations a short-lived cellphone battery. The SmartGRIP also includes a 3G/4G MiFi channel (or any other mobile hotspot), which is bonded together with the smartphone's internal 3G/4G connection to combine two cellular connections beyond the smartphone, boosting live video transmission time, quality, reliability and performance.

Live Video Wherever, Whenever

SmartGRIP
